**Summary :** Free using the case study teaching method to promote college students critical thinking skills pdf download - no differences in claim and evidence identification were found between students who learned about specific biology topics using the case study method of instruction and those who were engaged in more traditional instruction and the students ability to identify claims and evidence and their factual knowledge showed little if any correlation the results of this research were inconclusive regarding whether or not the case study teaching method promotes college students general or domain-specific critical thinking skills and future research addressing this issue should probably utilize larger sample sizes and a pretest-posttest randomized experimental design
