Summary : Free adolescent cardiac issues an issue of pediatric clinics pdf download - most physicians entering the field of pediatric cardiology are drawn to it by an interest in the wide variety of congenital heart defects which present at various ages most congenital heart disease will be evident in early life presenting with cyanosis heart murmur congestive heart failure or shock textbooks in pediatric cardiology are filled overwhelmingly with chapters on the various congenital heart lesions which are encountered both rare and common however practicing pediatric cardiologists will be quick to point out that a significant number of referrals to any practice do not involve congenital heart problems reviewing our own statistics at the children s hospital of michigan cardiology center for the past two years 2010-2012 reveals that outpatient visits for new patient consultations examined by age groups are less than 1 year of age - 11 1-5 years - 23 6-10 years - 21 11-18 years - 45 retrospective data collected from billing codes as in this brief survey may imprecise however it does provide a snapshot of the usual referral problems encountered by pediatric cardiologists in our practice the most common overall reason for referral in all ages was heart murmur constituting 26 of total referrals second were rhythm and rhythm related problems inclusive of palpitations abnormal ecg and diagnosed premature beats constituted 19 of the total in the age group of interest for this book of 11-18 years the most common presenting issues were rhythm related 23 and chest pain 23 followed by syncope or dizziness 19 and heart murmur 12 congenital heart disease diagnoses encountered in the 11 to 18 year age group comprised only 6 5 of referrals within that age group it is likely that many of these were not new diagnoses with a few exceptions but rather represented transfers to our practice our own outpatient clinical experience reveals that the majority of outpatients referred by pediatricians for pediatric cardiology evaluation are between the ages of 11 and 18 the majority of these new referrals are not for congenital heart disease our intent for this edition of pediatric clinics of north america is to describe the types of problems which seem to be of concern to the pediatric community within this age group and to describe strategies for evaluation
