Summary : Free geotechnical and geophysical site characterization 4 pdf download - site characterization is a fundamental step towards the proper design construction and long term performance of all types of geotechnical projects ranging from foundation excavation earth dams embankments seismic hazards environmental issues tunnels near and offshore structures the fourth international conference on site characterization isc 4 was held in porto de galinhas pernambuco brazil from 18 to 21 september 2012 under the responsibility of tc-102 tc-16 on in-situ testing of the international society for soil mechanics and geotechnical engineering issmge the brazilian society for soil mechanics and geotechnical engineering abms and the federal university of pernambuco brazil ufpe financial support of isc4 was provided by the brazilian national science and education councils cnpq capes and facepe sponsors and exhibitors and other organizations and companies the fourth conference followed the successful series of international conferences held in atlanta isc-1 1998 porto isc-2 2004 and taipei isc-3 2008 isc 4 congregated several researchers geotechnical engineers and practitioners from all over the world involved with the conference general themes namely practical application of novel and innovative technologies in geotechnical and geophysical engineering along with their interpretation and utilization for the purposes of site characterization the two volumes making up geotechnical and geophysical site characterization 4 contain 8 keynote lectures prepared by experts in the field including the 5th james k mitchell lecture presented by dr peter k robertson and 4 workshop lectures and 217 technical papers from 40 different countries the books are divided into 11 general themes 1 direct-push and borehole-type in-situ test 2 development of new equipment and methods 3 new approaches for interpreting data 4 applications to shallow and deep foundations 5 special uses of in-situ tests 6 site investigation for infrastructure projects 7 geophysical 8 seismic ground hazards 9 investigation in very soft to extremely soft soils 10 non-textbook type geomaterials 11 environmental geotechnics geotechnical and geophysical site characterization 4 will be much of interest to academics engineers and professionals involved in geotechnical engineering
