Summary : Free sustainable development in mineral economies pdf download - the mineral economies comprise approximately one-fifth of developing countries they face special problems in achieving sustainable development and have as a group been less successful than resource-deficient neighbours this book examines the apparent paradox detailing the current problems facing the mineral economies and the future policies necessary to overcome these problems nine countries are studied botswana chile colombia indonesia jamaica namibia papua new guinea peru and trinidad and tobago the authors argue that the key factor is not the sustainability of the mineral production that initially generates growth but the maintenance of the economic and social conditions for sustaining that growth they draw upon recent progress in environmental and natural resource accounting to show how this can be achieved and also assess the socio-political factors that often constrain sustainable development
