Summary : Free teaching vocabulary to primary grade students within a school reform project pdf download - the purpose of this study was to examine the vocabulary teaching of primary grade teachers involved in a school reform project a total of 337 observations were made in primary classrooms during their entire 3-hour reading and language arts blocks over a 3-year period of the reading first project observations were made using the i c e - r2 and summary statements were written about what the teachers implicit and explicit vocabulary instruction a coding scheme was developed from the observations to further analyze the vocabulary instruction the coding scheme examined teachers instruction in terms of teaching 1 specific words 2 word learning strategies 3 word consciousness 4 explicit and 5 oral or written instruction in word learning in addition 15 teachers were interviewed about their vocabulary instruction results indicated that teachers spent 5 of their time on average during their reading and language arts blocks on vocabulary instruction most of that time was spent on specific word learning as compared to word strategies and almost no time on word consciousness there was almost no instruction that was strictly teacher talk instead almost all instruction included student teacher interaction where teachers assisted students in learning individual words second- or third-grade teachers conducted 75 of the vocabulary instruction and only 60 of the teachers on average provided any vocabulary instruction interviews with teachers indicated that they were purposeful in selecting the specific words they taught although they did so for a variety of reasons further they stated that the professional development about vocabulary they had received as a result of participating in the reform project had impacted their knowledge about vocabulary instruction they were most familiar with the methods and approaches advocated by beck mckeown and their colleagues overall results suggested that teachers were teaching vocabulary in a way that was more than just assigning and mentioning words as some previous research had suggested however the instruction had not yet reached the more advanced stages of implementation of high quality vocabulary instruction interviews suggested that the

professional development impacted how teachers thought about and articulated their teaching of vocabulary instruction much of that knowledge was inert and not yet enacted
