**Summary :** Free prevention and treatment of delayed ischaemic dysfunction in patients with subarachnoid haemorrhage pdf download - during the last meeting of the european association of neurosurgical societies barcelona 7-16 september 1987 a symposium was devoted to the use of calcium antagonists in cerebral vasospasm as shown by its title prevention and treatment of delayed ischaemic dysfunction in patients with subarachnoid haemorrhage an update papers presented at the symposium covered a broad spectrum from some basic data on pathophysiology of subarachnoid haemorrhage sah and delayed ischaemic dysfunction to the clinical use of nimodipine which has been largely documented among calcium inhibitors for its cerebrovascular properties this supplementum of acta neurochirurgica is based upon the papers presented some articles however have been extended to take into account further results in order to present a broad view of the subject the symposium started with two presentations concerning general aspects of sah in the first one b voldby reviewed the pathophysiological events following sah if modifications of intracranial pressure icp and decrease of cerebral blood flow cbf are the primary alterations metabolic changes particularly reduction in cmr0 2 contribute rapidly to disturbances of brain circulation a variety of mechanisms may be responsible for the neurological dysfunction most of them are directly related to the reduction in cerebral perfusion pressure cpp which may result in ischaemia this fall in cpp either due to elevation of icp or reduction of mean arterial blood pressure is observed under different pathophysiological conditions discussed in the paper by a d mendelow
