Summary : Free harnessing resource wealth for inclusive growth in fragile states pdf download - like other fragile sub-saharan african countries cote d'ivoire guinea liberia and sierra leone are seeking to harness their natural resource potential in the context of ambitious development strategies this study investigates options for scaling up public investment and expanding social safety nets in a general equilibrium setting first it assesses the macro-fiscal implications of alternative fiscal rules for public investment and second it explicitly accounts for redistribution through direct cash transfers results show that a sustainable non-resource deficit target is robust to the high uncertainty of resources output and prices while delivering growth benefits through higher public investment the scaling-up magnitudes however depend on the size of projected resource revenue and absorptive capacity adding a social transfer raises private consumption suggesting that a fraction of the resource revenue could be used to expand safety nets
