

IBM, WebSphere,

IBM

IBM z/OS V2R1 Communications Server
TCP/IP Implementation Volume 1: Base
Functions, Connectivity, and Routing

Describes important TCP/IP base
function capabilities

Includes base function
implementation examples

Provides techniques for
installation verification

Summary : Free ibm z os v2r1 communications server tcp ip implementation volume 1 base functions connectivity and routing pdf download - for more than 40 years ibm mainframes have supported an extraordinary portion of the world s computing work providing centralized corporate databases and mission-critical enterprise-wide applications ibm system z the latest generation of the ibm distinguished family of mainframe systems has come a long way from its ibm system 360 heritage likewise its ibm z os operating system is far superior to its predecessors in providing among many other capabilities world-class state-of-the-art support for the tcp ip internet protocol suite tcp ip is a large and evolving collection of communication protocols managed by the internet engineering task force ietf an open volunteer organization because of its openness the tcp ip protocol suite has become the foundation for the set of technologies that form the basis of the internet the convergence of ibm mainframe capabilities with internet technology connectivity and standards particularly tcp ip is dramatically changing the face of information technology and driving requirements for even more secure scalable and highly available mainframe tcp ip implementations the ibm z os communications server tcp ip implementation series provides understandable step-by-step guidance for enabling the most commonly used and important functions of z os communications server tcp ip this ibm redbooks publication is for people who install and support z os communications server it introduces z os communications server tcp ip describes the system resolver showing implementation of global and local settings for single and multi-stack environments it presents implementation scenarios for tcp ip base functions connectivity routing virtual mac support and sysplex subplexing
