Summary : Free target volume delineation and field setup pdf download - this handbook will enable radiation oncologists to appropriately and confidently select and delineate tumor volumes fields for conformal radiation therapy including intensity-modulated radiation therapy imrt in patients with commonly encountered cancers the orientation of this handbook is entirely practical in that the focus is on the illustration of clinical target volume ctv delineation for each major malignancy each chapter provides guidelines and concise knowledge on treatment planning and ctv selection explains how the anatomy of lymphatic drainage shapes target volume selection and presents detailed illustrations of delineations slice by slice on planning ct images while the emphasis is on target volume delineation for three-dimensional conformal therapy and imrt information is also provided on conventional radiation therapy field setup and planning for certain malignancies for which imrt is not currently suitable
