**Summary :** Free chemicals and fuels from bio-based building blocks pdf download - an up-to-date and two volume overview of recent developments in the field of chemocatalytic and enzymatic processes for the transformation of renewable material into essential chemicals and fuels experts from both academia and industry discuss catalytic processes currently under development as well as those already in commercial use for the production of bio-fuels and bio-based commodity chemicals as such they cover drop-in commodity chemicals and fuels as well as bio-based monomers and polymers such as acrylic acid glycols polyesters and polyolefins in addition they also describe reactions applied to waste and biomass valorization and integrated biorefining strategies with its comprehensive coverage of the topic this is an indispensable reference for chemists working in the field of catalysis industrial chemistry sustainable chemistry and polymer synthesis
