Summary : Free distributed data fusion for network-centric operations pdf download - with the recent proliferation of service-oriented architectures soa cloud computing technologies and distributed-interconnected systems distributed fusion is taking on a larger role in a variety of applications from environmental monitoring and crisis management to intelligent buildings and defense drawing on the work of leading experts around the world distributed data fusion for network-centric operations examines the state of the art of data fusion in a distributed sensing communications and computing environment get insight into designing and implementing data fusion in a distributed network addressing the entirety of information fusion the contributors cover everything from signal and image processing through estimation to situation awareness in particular the work offers a timely look at the issues and solutions involving fusion within a distributed network enterprise these include critical design problems such as how to maintain a pedigree of agents or nodes that receive information provide their contribution to the dataset and pass to other network components the book also tackles dynamic data sharing within a network-centric enterprise distributed fusion effects on state estimation graph-theoretic methods to optimize fusion performance human engineering factors and computer ontologies for higher levels of situation assessment a comprehensive introduction to this emerging field and its challenges the book explores how data fusion can be used within grid distributed and cloud computing architectures bringing together both theoretical and applied research perspectives this is a valuable reference for fusion researchers and practitioners it offers guidance and insight for those working on the complex issues of designing and implementing distributed decentralized information fusion
