Summary : Free advances in design methods from modeling languages for embedded systems and soc s pdf download - more than ever fdl is the place for researchers developers industry designers academia and eda tool companies to present and to learn about the latest scientific achievements practical applications and users experiences in the domain of specification and design languages fdl covers the modeling and design methods and their latest supporting tools for complex embedded systems systems on chip and heterogeneous systems fdl 2009 is the twelfth in a series of events that were held all over europe in selected locations renowned for their universities and reseach institutions as well as the importance of their industrial environment in computer science and micro-electronics in 2009 fdl was organized in the attractive south of france area of sophia antipolis together with the dasip design and architectures for signal and image processing conference and the same sophia antipolis microelectronics forum all submitted papers were carefully reviewed to build a program with 27 full and 10 short contributions from these the program committee selected a shorter list based on the evaluations of the reviewers and the originality and relevance of the work that was presented at the forum the revised and sometimes extended versions of these contributions constitute the chapters of this volume advances in design methods from modeling languages for embedded systems and soc s presents extensions to standard specification and description languages as well as new language-based design techniques and methodologies to solve the challenges raised by mixed signal and multi-processor systems on a chip it is intended as a reference for researchers and lecturers as well as a state of the art milestone for designers and cad developers
